No.004

TO : All CCS Lightning Dealers

DATE : November 20, 2006

SUBJECT : **NEW POWER DISTRIBUTION BOX**

Existing SHORE POWER DISTRIBUTION BOX P/N 1060859 with hard wired 30A shore power inlet is being replaced by **NEW SHORE POWER DISTRIBUTION BOX P/N 1065565**.

NOTICE:

If the truck has a factory installed inverter option, **DO NOT** connect CCS distribution box in to the existing factory shore power harness.

When truck has factory installed inverter option both Inverter and CCS must have dedicated shore power connections and dedicated internal outlets; equipment must not be shared between these two systems (Separate internal outlet (P/N 1061931) which comes with standard installation kit (P/N 1061563) and shore power (kit P/N 1067221) must be installed).

The new box uses a Phillips & Temro type connector that is the industry standard, this will allow use of factory option shore power inlet on some trucks (Volvo, International...) and will simplify installation by avoiding necessity of using 15A/30A adapter and installation of separate internal outlet.

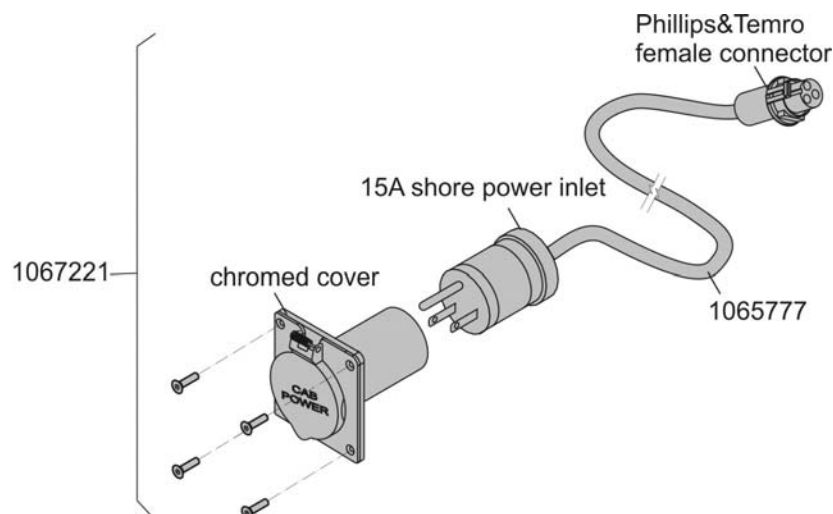

NEW SHORE POWER DISTRIBUTION BOX P/N 1065565 can accept shore power inlet that is already installed on the truck from factory (check existing harness length whether it will reach to the intended power distribution box location) or can be used in conjunction with following parts:

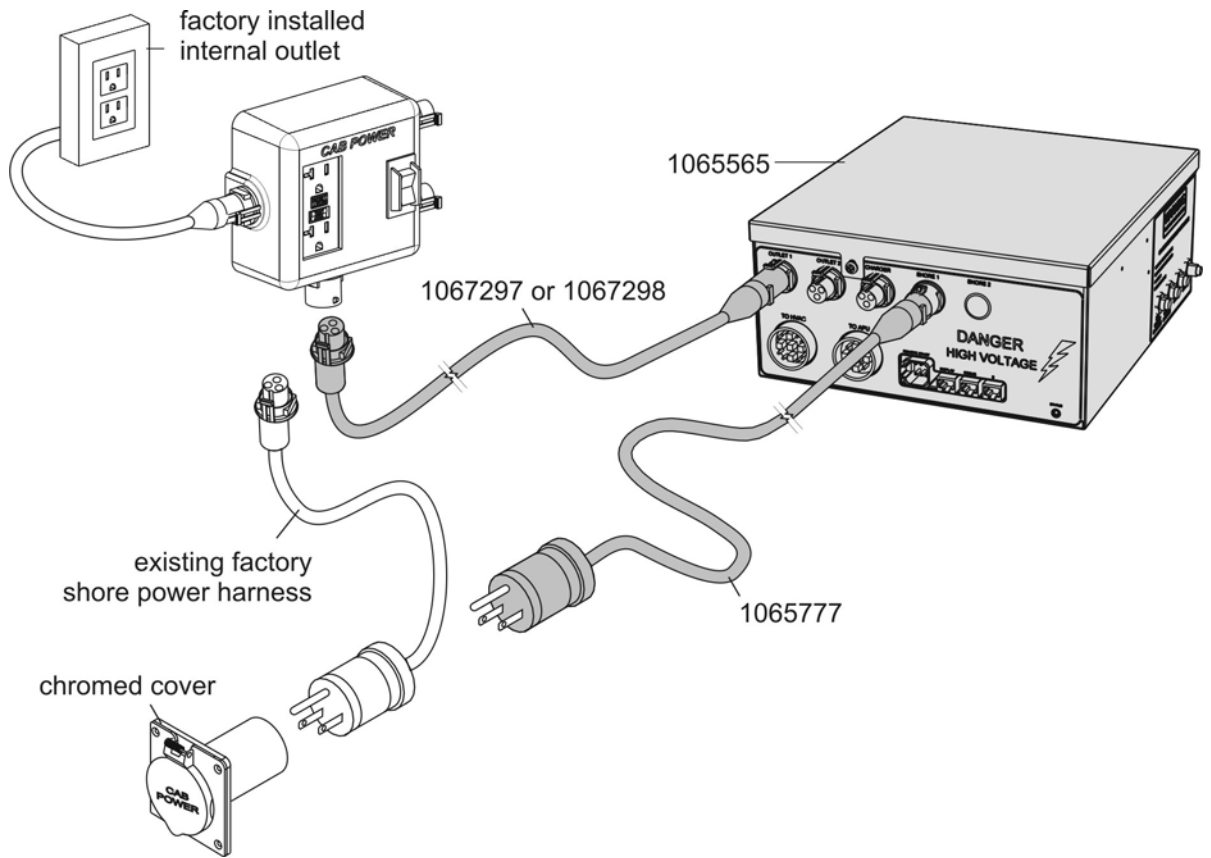

- **1067221 CCS, SHORE POWER KIT, 15 AMP**

This kit includes 7.5ft long harness (one side is 15A shore power inlet, other side Phillips & Temro female connector), chromed cover, which is to be mounted outside on the side of the truck and 4 mounting screws for the cover.

- **1065577 HARNESS, SHORE POWER, 14GA, AC-IN, 15A**

This harness is part of above kit (1067221) and can be used on the **truck with existing factory shore power option** when original harness is too short

- 1067297 HARNESS, 36" CAB POWER 14/3
- 1067298 HARNESS, 120" CAB POWER 14/3

These two harnesses (one side Phillips&Temro female connector, other side Phillips&Temro male connector) are **extensions** and can be used

- when 1065777 harness is too short
- when existing factory shore power harness is too short
- to connect existing factory installed **internal outlets** (CabPower from Phillips&Temro) to the new power distribution box (see image above).
